Landmark Fire Alarm

Case Study

Overview

Type of site Commercial
Number of users 20
Number of doors 1
Location New Jersey, United States

Client

Landmark Fire Alarm Inc. is a full service fire protection contractor providing sprinkler, special hazard suppression, and access control solutions for buildings of every size. From code-compliant design and professional installation to acceptance testing and ongoing inspections, their team keeps your property and people protected with one trusted partner.

Solution

Installed in 2026 by Landmark Fire Alarm themselves, Controlsoft's Identity Access system now secures their own premises with a one-door setup.

Integration with HID Wallet Pass means staff and visitors can be issued Apple Wallet or Google Wallet credentials remotely, straight to their smartphones or smartwatches, with no app required. It's a seamless, contactless way to grant access, turning the smartphone or smartwatch every user already carries into their secure door credential.

> **With HID Wallet Pass, Landmark staff can use the phone or smartwatch they already carry as their access credential, with no app and no cards to issue.**
