

# Alsop High School

## Case Study

### Overview

Type of site **Education, Secondary School**  
 Number of users **2000+ Pupils and staff**  
 Number of doors **73**  
 Location **Liverpool, United Kingdom**

### Client

Alsop High School is one of the largest secondary schools in the city of Liverpool, with nearly 1800 students, including over 300 in the sixth form.

### Solution

In 2010, Safer Osmani, Business Manager for Alsop School, decided to implement a Fingerprint Access Control System. After reviewing several fingerprint solutions, Safer decided on Controlsoft.

As the system has expanded, next generation fingerprint readers have been installed. The site now has 3 generations of Idemia fingerprint readers seamlessly operating together. You will find the original MA-500s, Morpho J Series as well as Sigma Lite readers by IDEMIA.

Many of the original iNet door controllers installed in 2010 are still in operation today, which clearly demonstrates that Controlsoft and IDEMIA biometric readers can stand the test of time.

Alsop High School opted for fingerprint readers with an internal card reader. This gives staff & visitors the option to use a card or keyfob as well as their fingerprints

**I am still impressed with the quick identification speed of the readers and the overall performance of the system**

**Safer Osmani, Business Manager**

### Products used

-  **iNet Door Controllers**
-  **Identity Access Software**
-  **Idemia Sigma Lite, J Series and MA-500 Biometric Readers**
