

# British Racing Drivers' Club

## Overview

Type of site Leisure  
Number of users 3,000  
Number of turnstiles 8  
Location Northamptonshire, United Kingdom

## Client

Widely regarded as the most prestigious motor racing club in the world, the British Racing Drivers' Club at Silverstone hosts the British Grand Prix, as well as a number of other major race events during the year.

## Solution

Initially installed in 2001, Identity Access has provided 25 years of uninterrupted security at the home of the British Grand Prix. The system's intelligence drives 8 turnstiles, managing the complex 'buddying' logic required for members and their guests. While the software has been modernized for 2026, our controllers and readers remain the

operational heart of the clubhouse. This 25-years of service proves the platform's longevity and ROI. It has evolved alongside the club, showing that while software modernizes, the original hardware still effortlessly handles the unique, high-capacity demands of Grand Prix weekends.

“Through the use of Identity Access, the management of the complex rotation of Members and their guests into our exclusive areas is simple and efficient.  
Sue Gold, British Racing Drivers' Club

## Products used

- i-Net door controller
- Identity Access Software
- HID Readers
